

1. Step 1: Install Java JDK 17+ and set JAVA\_HOME.
2. Step 2: Install Maven or Gradle.
3. Step 3: Pull a local LLM via Ollama (e.g., ollama pull llama2).
4. Step 4: Create a Spring Boot project using start.spring.io, adding Spring AI and Spring Boot Web dependencies.
5. Step 5: Add the Ollama model dependency (spring-ai-model-ollama) to your build file.
6. Step 6: Configure application.yml with ollama base URL and model name.
7. Step 7: Implement a service class that calls Ollama's /api/chat endpoint using RestTemplate or WebClient.
8. Step 8: Create a REST controller with a /generate endpoint that invokes the service and returns the generated text.
9. Step 9: Run the application (mvn spring-boot:run) and test with curl or Postman.
